This May Help Some

A citizen of this city has recently referred a complaint to the Director General of Railroads at Washington, D. C. This complaint voiced the sentiments of many of our citizens who have encountered difficulties in obtaining Pullman reservations from Winchester, to the East through the local agents. This case was handled by the Director of the Division of Traffic, who has been informed by the General Passenger Agent i that General Agent at Lexington and the Assistant Superintendent of Kentucky Division have been instructed, "To caution ticket sellers and clerks to be on the alert, make the reservations immediately and when replies are not received within a reasonable length of time, ask for an answer and not wait for the public to make inquiry whether reply is received, but keep behind these matters in order that the public may receive the highest standard of Service." This shows con-clusively that the Railroad Administration desires to render efficient service and it remains to be seen what improvement is forthcoming.

ROSEN RYE

SOME FACTS ABOUT ROSEN RYE:-Some few years ago a handful of this Rye was brought from Russia and given to Prof. Spragg, of Michigan, who experimented with it, finally selecting a single plant showing remarkable characteristics. The grain from this plant was saved and planted next season, when the process was repeated until sufficient had been obtained to experiment with a few expert farmers in different localities. At the State Experimental Farm the average yield was over 41 bushels per acre, the quality of the grain being exceptionally high.

It is claimed for Rosen Rye that on account of the manner in which it has been handled it is the purest pedigree seed in existence, particular pains being taken to prevent mixing with other grain. For the past four years the yield of this Rye was fine, averaging from 25 to 45 bushels, the quality being equal to or superior to the best common Rye even in the poor Rye years. The latest yields have been as high as 45 bushels to the acre, with ansaverage of 35 bushels, while the common variety has averaged about 21 bushels.

The opinion is freely expressed by those who have tried Rosen Rve that it pays better to plant this seed, even if the price is twice as high as the common variety, both on account of the excess yield and the better quality of the crop.

ROSEN RYE produces a strong, vigorous straw, and stools to a remarkable degree. The grain is large, plump, heavy and of a beautiful dolor, ordinarily has four full rows of grain on over 90 per cent of its heads. Seldom winter kills and is especially good on lighter soils. It usually commands a premium in the market over other varieties. On account of its vigorous stooling property less seed is required, the practice being three or four pecks.

We are booking orders for this seed, and if you are going to need Rye for your trade, we advise you to investigate ROSEN and let us quote you prices.
